## Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

### NOTICE WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

**ICPSR PROCESSING NOTES FOR #33504**  
*Voice of the People End of Year Survey, 2011*

- 1) **Unique identifier:** ICPSR has added the variable **CASEID** 'CASE IDENTIFICATION NUMBER' to the data to uniquely identify each record.
- 2) **Original Documentation Inconsistencies:**
  - Please refer to the "Summary Chart on Methods" section in the ICPSR codebook for those countries that were participants in this survey. The setup files may contain references to a number of countries that were not participants in this survey. This collection contains no data for these countries.
  - For Austria, Fiji, Ghana, Iceland, Lithuania, the Netherlands, and Tunisia, the total number of interviews in the "Summary Chart on Methods" does not match the total number of interviews in the data file.
  - The Mode of Interview, Coverage, and Field Work Dates in the Summary section following the "Summary Chart on Methods" contains information inconsistent with what is reported in the "Summary Chart on Methods".
  - Although the study title indicates the survey was carried out in 2011, the "Summary Chart on Methods" states that Poland carried out the survey between December 30, 2011 and January 5, 2012.
  - Please disregard the column locations provided in the "Questionnaire" as they are not applicable to the ICPSR-provided data file. The column locations for the ICPSR-provided data file can be found in the SPSS and SAS setup files, and Stata dictionary file.
- 3) **Undocumented Code:** Variable **D2** has a code of '9999' in the data for which no clear explanation has been given, it was recoded as "NR".
- 4) **STATA Limitations:** Some of the variables in this collection have a large amount of values. When tabulating these variables in Stata (Windows and Linux), an error message "too many values" appears.

To prevent this error message, the *tab1* command can be run using ranges of values specified after the *if* statement.

e.g., *tab1 VAR1 if VAR1 >0 & VAR1 <= 4500*  
*tab1 VAR1 if VAR1 >45000 & VAR1 <= 100000*

In addition, the command *bigtab* can be used (e.g. *bigtab VAR1*), but in Windows only. It is available via download by typing the Stata command line *ssc install bigtab (bigtab Author: Paul H. Bern, Princeton University)*.

## Data Completeness Report

Notes: (1) Variables are individually listed only if they have greater than 5% missing data. These variables are listed under the appropriate percentage category in the order in which they appear in the data file. (2) The Data Completeness Report only captures information about system missing or other values that are declared missing. Codes that have a label implying that they are missing but that are not declared missing values are not reflected in this report. Data users should consult the codebook for more specific information about missing values. (3) Some variables that have 100% missing data may have been blanked by ICPSR to protect respondent confidentiality. Data users should consult the codebook for more specific information about blanked variables. (4) Data do not contain skip patterns or skip patterns are not reflected in the data as coded.

#### **Variable Description and Frequencies**

**Note:** Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
